

PDF reader.

Code Overview

The PDF file is read using the PyPDF2 library.

The text content is extracted from each page of the PDF and cleaned.

The pyttsx3 library is used to initialize a text-to-speech engine.

The cleaned text is converted to speech and saved as an audio file.

Example

You can find an example PDF file named book.pdf in the repository. After running the script, an audio file named story.mp3 will be generated.
